Arterial Blood Gas (ABG) Analyzer - MDCalc

Mixed venous gases measures oxygen left in the blood as it returns to the heart (right side) after it has been pumped around the body supply- ing cells with oxygen. The body normally extracts 25% of available oxygen and leaves 75% in reserve in times of stress or illness.⁴

ABGEASY AS..

So within an arterial blood gas the normal range for pH should be 7.35-7.45 (Guyton and Hall, 2000). In the simplest terms, if the pH is within the range of 7.35-7.45 the acids and the alkalis within the blood are correctly balanced. Thus, the acid-alkali balance is being measured, but this is not referred to as a patient's acid-alkali balance.
