These ASCOM drivers are for your Celestron mount, not the Skyris camera. Skyris will work in other programs as outlined in step 2. Download and install a popular autoguiding program of your choice, such as PHD Guiding. The camera works with a number of other programs such as MaxIm DL, Guidemaster, MetaGuide, and more.

How do I use Skyris as an autoguider? | Celestron ...

The Off-Axis Guider is an essential astroimaging accessory for long focal length telescopes that require the most accurate guiding possible. The Celestron Off-Axis Guider uses a prism to intercept a small portion of the telescope's focal plane (outside the field of view of the main imaging camera) to locate a guide star.

This NexGuide Autoguider from Celestron is a stand-alone autoguider. Using this autoguider eliminates the need for a computer to control the mount. Users with DSLR cameras can use this to enhance their imaging sessions by pointing to the wanted celestial object, and keeping the object centered!

Celestron NexGuide Autoguider - 93713 - High Point Scientific

The Off-Axis Guider from Celestron is an astrophotography accessory used to compensate for tracking errors and align the focal planes of an imaging camera and autoguider.

Celestron Off-Axis Guider 93648 B&H Photo Video

The camera, computer and software are often integrated into one unit in standalone autoguiders such as the popular Celestron NexGuide or Sky-Watcher SynGuider. Off-axis guiding has the advantage of eliminating a separate guidescope, thereby avoiding the potential for flexure and reducing load on the mount.
