Many surgeons will order electrodiagnostic testing before recommending surgery for these conditions. Electrodiagnostic testing also can be used to determine the extent of injury to a nerve after an accident and to study the effects of diseases such as diabetes. It can also show if an injured nerve is healing.

Electrodiagnosis (EDX) is a method of medical diagnosis that obtains information about diseases by passively recording the electrical activity of body parts (that is, their natural electrophysiology) or by measuring their response to external electrical stimuli (evoked potentials). The most widely used methods of recording spontaneous electrical activity are various forms of electrodiagnostic ...

Nerve conduction study also known as nerve conduction velocity test is used to measure the speed of the electrical activity of a nerve. Nerve conduction studies can test sensory or motor nerve fibers and can determine both the speed of conduction as well as the amplitude of the electrical signal evoked following stimulation of a nerve. The sensory nerve action potential (SNAP) provides ...
