Acute urticaria is most often a benign, self-limited skin disease. It usually occurs independently, but it may contribute to the more serious clinical manifestations of anaphylaxis: angioedema and anaphylactic shock. The etiologies of both acute and chronic urticaria are numerous (see Causes in Presentation). The etiologic agent is more likely to be identified in acute urticaria (40-60%) than in ...

Environmental studies on different aspects of heavy metals and metalloids are interdisciplinary in nature and require background knowledge in environmental chemistry, ecotoxicology, and ecology. Analysis of xenobiotics such as toxic heavy metals in food chains is an important study area and has environmental, ecological, and economic importance.

Mercury is a toxic heavy metal which is widely dispersed in nature. Most human exposure results from fish consumption or dental amalgam. Mercury occurs in several chemical forms, with complex pharmacokinetics. Mercury is capable of inducing a wide range of clinical presentations. Diagnosis of mercury toxicity can be challenging but can be obtained with reasonable reliability.
