Feed leopard geckos a variety of gut-loaded or dusted insects of appropriate size such as crickets, Phoenix worms, mealworms, and superworms. May be fed the occasional pinky mouse. Dust the non-breeding adult's diet with a calcium carbonate or calcium gluconate supplement once weekly, more often if the gecko is actively breeding.

### Basic Information Sheet: Leopard Gecko | LafeberVet

Unlike a traditional plant identification key that provides you with only two choices at each step (a dichotomous key), these keys let you select multiple characters simultaneously (polyclave key). This makes more character data available in the key and minimizes the number of steps it takes to identify a plant.

### Florida Lizards :: Florida Museum of Natural History

A dichotomous key is a type of single-access key that offers only two choices at one time. These keys are commonly used in biology in order to identify an unknown animal or plant. In order to use these keys, the user determines which of the two different choices is correct and then follows the key until a final choice eventually leads to the name of the organism.

### What is a Dichotomous Key? - wiseGEEK

A dichotomous key is constructed of a series of couplets, each consisting of two separate statements. For example:couplet 1. Seeds round soybeans. 1. Seeds oblong 2 (this statement indicates that you go to couplet "2") couplet 2. Seeds white northern beans. 2. Seeds black black beans.

### Salamander Key - BIOLOGY JUNCTION

A dichotomous key is a tool that scientists use to tell species apart, especially if they look similar. It consists of a series of questions with two possible responses. The response to each question will lead you to the following question, until you arrive at the name of the species you are attempting to identify.
