The Physiology of Peritoneal Dialysis

Background and objectives The role of peritoneal dialysis in the management of AKI is not well defined, although it remains frequently used, especially in low-resource settings. A systematic review was performed to describe outcomes in AKI treated with peritoneal dialysis and compare peritoneal dialysis with extracorporeal blood purification, such as continuous or intermittent hemodialysis.

Use of Peritoneal Dialysis in AKI: A Systematic Review ...

Historically, 2 l of dialysis fluid are administered for the dwell during peritoneal dialysis in adult patients. This will vary from 1.5 l in the very small adult to 2.5 l in the very large adult. Originally, volumes were derived from the classical amount of 2 l in the standard adult person.

Nephrology - Dwell Volume Assessment in Peritoneal Dialysis

Automated peritoneal dialysis is a broad term that refers to all forms of peritoneal dialysis that utilize a mechanical device (called a cycler) for instillation and drainage of dialysis fluid. In its simplest, earliest form (known as intermittent peritoneal dialysis [IPD]), it was delivered in hospitals intermittently for prolonged periods of up to 24 hours, exchanging 20 to 60 L of dialysis ...
