Portland State University

The sample project is only a fraction of the length of your projects, though. What goes into a design document? A design document is a complete high-level solution to the problem presented. It should be detailed enough that somebody who already understands the problem could go out and code the project without having to make any significant ...

How to Write a Design Document

A software design document describes the solution to a problem. So naturally, since every problem is different, there can be no one-fits-all template. No two software design documents are alike. Here's what a software design document could look like in Nuclino, a collaborative documentation tool for teams:

How to Write a Software Design Document (SDD)

Solution architecture in the context of the enterprise and technical architecture. Besides these roles, some specifically add an infrastructure architect to the paradigm. This position becomes relevant for organizations that maintain complex hardware infrastructure in-house to support operations.

Solution Architect: Role and Responsibilities | AltexSoft

To document an emerging architecture, you have to keep a separate document updated along with the software. Since the software already serves as the documentation (see "The Source Code Is the Specification"), there's no need to produce a second specification (e.g., no need to create a software architecture document since the code ...

Software Architecture Document? Do You Need One? - NDepend

Accept Solution Reject Solution High Level Design (HLD) is the overall system design - covering the system architecture and database design. It describes the relation between various modules and functions of the system. data flow, flow charts and data structures are covered under HLD.
